

NEXTMILE RENTALS

Brand Color & Typography System

V1 implementation specification

Design intent

A clear, trustworthy and mobile-first identity for a local vehicle-rental business serving working gig and delivery drivers. The system prioritizes legibility, direct action, practical confidence and operational credibility.

Prepared from the NextMile Rentals Website Design Brief

Recommended for web, email, dashboard, forms and lightweight print collateral.

1. Brand direction

NextMile should look like a dependable mobility service for working drivers - not a luxury rental company, dealership or generic software startup.

CLEAR Explain the offer, price, requirements and next action without ambiguity.	TRUSTWORTHY Use restrained color, real information, visible contact details and strong contrast.
PRACTICAL Prioritize mobile use, quick scanning, large controls and straightforward language.	MOMENTUM Every visual decision should help a driver move toward availability checking or application.

Visual personality

- Modern, calm and competent.
- Friendly, but never casual or childish.
- Automotive, but not dealership-driven.
- Professional, but not cold or bureaucratic.
- Conversion-focused, without fake urgency or exaggerated claims.

Color distribution

Use the palette in controlled proportions. Most screens should remain neutral.

Layer	Approx. share	Primary colors	Purpose
Neutral surfaces	70-80%	White / Soft Gray	Space, readability, calm
Navy / dark text	12-18%	Deep Navy / Ink	Structure, headings, trust
Primary blue	5-10%	Action Blue	CTAs, links, active states
Status colors	<5%	Green / Amber / Red	Real operational states only

COLOR TOKENS

2. Core color palette

These colors form the default V1 system. Do not introduce additional brand colors without a specific semantic need.

Swatch	Token	Role	Use
#102A43	Deep Navy	Brand anchor	Primary headings, top utility bar, footer, strong information panels
#1769E0	Action Blue	Primary action	Primary CTA, links, selected controls, progress indicators
#1258BC	Blue Hover	Interaction	Hover, pressed and high-emphasis link state
#EAF3FF	Pale Blue	Support surface	Hero accent, informative panels, requirement and reassurance sections
#17212B	Ink	Primary text	Body copy, labels, table data and general UI text
#5D6B79	Slate	Secondary text	Supporting copy, metadata, helper text and inactive navigation
#DDE4EC	Border	Separation	Card borders, dividers, inputs and table rules
#F6F8FB	Soft Gray	Section surface	Alternating sections, dashboard canvas and low-emphasis cards
#FFFFFF	White	Base surface	Page background, cards, buttons on dark backgrounds

Primary usage rules

- Action Blue is reserved for actions and active states; it should not become a decorative background across the whole page.
- Deep Navy carries brand authority and may cover large areas such as the footer or final CTA section.
- Ink is the default body-text color. Slate is for supporting information only.
- Pale Blue and Soft Gray separate content without heavy borders or shadows.
- White space is an active brand element; do not fill every region with color.

3. Status and accessibility colors

Status colors communicate real business conditions. Never use them merely to decorate cards or headings.

Swatch	Token	Meaning	Approved usage
#16794A	Available Green	Positive / available	Available now, completed, verified, successful submission
#B76E00	Caution Amber	Limited / pending	Available soon, review pending, incomplete information
#A83B3B	Issue Red	Error / unavailable	Validation error, failed action, unavailable, destructive warning

Recommended soft status backgrounds

State	Foreground	Background
Success / Available	#16794A	#EAF7F0
Caution / Pending	#B76E00	#FFF4DC
Error / Unavailable	#A83B3B	#FDEEEE

Contrast rules

Foreground	Background	Ratio	Decision
Deep Navy #102A43	White #FFFFFF	14.64:1	AAA - headings and body
Action Blue #1769E0	White #FFFFFF	5.08:1	AA - CTA text and links
Ink #17212B	White #FFFFFF	16.29:1	AAA - default body copy
Slate #5D6B79	White #FFFFFF	5.46:1	AA - supporting text
Green #16794A	White #FFFFFF	5.43:1	AA - status text
Amber #B76E00	White #FFFFFF	4.00:1	Do not use for small white text
Red #A83B3B	White #FFFFFF	6.26:1	AA - error text

Minimum standard: WCAG AA. Never communicate availability, errors or progress through color alone; pair color with text and/or an icon.

4. Typography system

Use one family across the entire product to preserve consistency, performance and operational simplicity.

Inter Display

Headlines, hero copy and major section titles

Get a Reliable Vehicle. Start Earning.

Inter

Body copy, navigation, labels, buttons, forms, tables and admin interfaces. Reliable weekly rentals for working drivers who need clear requirements, straightforward pricing and local support.

Approved weights

Weight	CSS	Use	Restriction
Regular	400	Body copy, descriptions, form input	Default text weight
Medium	500	Navigation, metadata emphasis, compact labels	Do not use for long paragraphs
Semi Bold	600	Buttons, card titles, form labels	Preferred UI emphasis
Bold	700	Hero, page and section headings	Use sparingly for hierarchy

Fallback stack

"Inter", "Inter Display", system-ui, -apple-system, BlinkMacSystemFont, "Segoe UI", sans-serif

HIERARCHY

5. Responsive type scale

Desktop and mobile sizes are specified separately. Use fluid scaling between breakpoints; never shrink desktop headings mechanically.

Token	Desktop	Mobile	Weight	Line height	Tracking	Use
Display XL	64 px	40 px	700	1.05 / 1.08	-0.035em	Primary hero headline
Display L	52 px	36 px	700	1.08 / 1.10	-0.03em	Alternate hero / campaign
H1	44 px	34 px	700	1.12	-0.025em	Page title
H2	36 px	28 px	700	1.18	-0.02em	Major section title
H3	26 px	22 px	600	1.25	-0.012em	Subsection / large card
H4	20 px	18 px	600	1.30	-0.005em	Card and panel title
Body L	18 px	18 px	400	1.60	0	Hero support / lead
Body	16 px	16 px	400	1.55	0	Default copy and form input
Body S	14 px	14 px	400	1.50	0	Helper text and metadata
Label	14 px	14 px	600	1.25	0.01em	Form labels and UI labels
Eyebrow	12 px	12 px	700	1.25	0.08em	Uppercase section cue
Button	16 px	16 px	600	1.00	0	Primary and secondary actions

Line-length rules

- Hero headline: 10-18 words; target 2-3 lines on mobile and 2 lines on desktop.
- Body paragraphs: 45-75 characters per line; avoid full-width text across large screens.
- Cards: 1-2 sentence descriptions; do not turn cards into mini articles.
- Buttons: 2-4 words where possible; use an explicit outcome, not "Learn More".
- Navigation labels: one or two words; maintain predictable naming across pages.

Capitalization

- Headings and buttons: sentence case.
- Eyebrows and compact status labels: uppercase only.
- Never use all caps for paragraphs, forms or FAQ questions.
- Use numerals for prices, steps, dates and availability counts.

6. Component application

The following mappings prevent arbitrary styling during development.

Component	Typography	Text color	Surface / border	Key rule
Utility bar	Body S / Medium	White	Deep Navy	One concise service or contact message
Main navigation	Body S / 500	Ink / Slate	White + Border	Active item may use Action Blue
Hero headline	Display XL / Bold	Deep Navy	White or Pale Blue	Maximum 2 lines desktop
Hero support	Body L / Regular	Slate	White	Limit width to ~560 px
Primary button	Button / 600	White	Action Blue	Hover uses Blue Hover
Secondary button	Button / 600	Action Blue	White + blue border	No shadow required
Section heading	H2 / Bold	Deep Navy	Any neutral surface	One clear promise per section
Card title	H4 / 600	Ink	White + Border	Do not center long card copy
Price	H2 or H3 / 700	Deep Navy	White	Rate and cadence stay together
Availability badge	Body S / 600	Status color	Soft status surface	Always include text label
Form label	Label / 600	Ink	White	Label remains visible above input
Input text	Body / 400	Ink	White + Border	Minimum 52 px mobile height
Helper text	Body S / 400	Slate	Transparent	Explain, do not repeat label
Validation error	Body S / 500	Issue Red	Optional error surface	Place beside affected field
Footer	Body S / 400	White / Pale Blue	Deep Navy	Legal entity and contact remain visible

Button specifications

- Desktop height: 48-52 px. Mobile height: 52-56 px.
- Horizontal padding: 20-24 px. Border radius: 12 px.
- Primary CTA: Action Blue background, white text, Blue Hover interaction.
- Secondary CTA: white background, Action Blue text and 1 px blue border.
- Disabled state: Soft Gray surface, Slate text, no shadow and no pointer action.
- Focus state: 3 px Pale Blue ring plus 2 px Action Blue outline.

7. Guardrails and implementation tokens

Do

- Use Deep Navy for authority, Action Blue for movement and neutral surfaces for breathing room.
- Use real availability and pricing states; the visual language must reflect operational truth.
- Keep body copy in Ink or Slate and preserve AA contrast.
- Use Inter Display only for large headings; use Inter for all functional interface text.
- Keep mobile typography at 16 px minimum for body and form inputs.

Don't

- Do not add gold, black-luxury styling, neon gradients or automotive-red accents.
- Do not use blue for every icon, border, heading and background simultaneously.
- Do not use thin font weights, condensed fonts or script lettering.
- Do not place small white text on Amber; the contrast is insufficient for normal text.
- Do not use status colors without labels or use green for generic decoration.
- Do not create more than three button styles.
