

Website & Driver Application System

A production-ready launch system for attracting, qualifying and managing gig-driver applicants.

V1 Objective

Attract qualified drivers, present clear pricing and requirements, capture every application reliably, and give the owner a simple workflow from new lead to scheduled pickup.

V1 Product Boundary

Public Website	Driver Application	Owner Dashboard
Explain the offer, pricing, requirements, availability and next steps.	Collect a short mobile-friendly prequalification application.	Review applicants, update statuses, add notes and control availability.

Primary Users

- ✓ Gig and delivery drivers seeking reliable weekly vehicle access.
- ✓ NextMile staff managing applications and category-level availability.

Primary Success Measure

Qualified applicants converted into scheduled pickups

Included Deliverables

Public website	• Responsive homepage • Fleet categories page • Pricing page • Requirements and FAQ content • Contact and click-to-call • Privacy, terms and platform disclaimer pages
Driver application	• Mobile-first multi-step form • Application review and confirmation • Server-side validation • Spam and duplicate protection • Database storage • Applicant confirmation email
Owner dashboard	• Secure admin login • Application list, search and filters • Applicant detail view • Status pipeline and history • Private notes and follow-up date • CSV export
Availability controls	• Manage vehicle categories • Edit weekly price and deposit • Set Available Now, Available This Week, Waitlist or Unavailable • Publish availability badges to the public site
Business controls	• Edit phone, email and business hours • Edit basic FAQ content • Track application source • View basic conversion metrics
Production launch	• Domain and SSL setup • Production database and backups • Transactional email setup • Analytics and Search Console • Error and uptime monitoring • Automated deployment pipeline

Client Handover

- ✓ Admin dashboard walkthrough and operating guide.
- ✓ Source-code repository, production access and service-account handover.
- ✓ Hosting, domain and recurring service-cost summary.

V1 Workflow

01 Discover	02 Understand	03 Apply	04 Review	05 Schedule
-----------------------	-------------------------	--------------------	---------------------	-----------------------

Out of Scope for V1

- Online booking and recurring Stripe billing
- Electronic rental contracts and secure document uploads
- Driver portal or native mobile applications
- Background checks, identity verification or platform verification
- GPS tracking, maintenance, accident and claims workflows
- Dynamic pricing, advanced fleet analytics or multi-location support

Client Inputs Required Before Launch

Commercial details Final weekly prices, deposits, fees, minimum term and payment rules.	Operating policy Service area, pickup process, business hours, mileage and maintenance rules.
Eligibility Age, licence, verification and platform-use requirements.	Brand assets Logo, real vehicle photos, business email and approved contact details.

Acceptance Criteria

- ✓ Visitors understand the offer, pricing, requirements and next action on mobile.
- ✓ Every valid application is stored before notifications are sent.
- ✓ The owner can review applicants, update statuses and change availability without a developer.
- ✓ Critical flows are tested, monitored and backed up in production.
- ✓ No fake testimonials, unconfirmed prices or unsupported platform claims are published.

V1 delivers a credible public website and a lightweight lead-and-availability operating system - not a full rental marketplace.
